## General Usage:

Sally Beauty Supply is requiring suppliers to provide electronic Invoices for all electronically created orders. This information will be used to automate the receipt of invoices, use the three-way matching functionality within their financial systems against the Inventory receipt and Purchase order and apply the invoice into their accounts payable system for timely payments to Suppliers. Suppliers are to create one invoice per single Purchase Order and shipment. Credit memos will not be included in the initial implementation, suppliers are to continue to manage credits through the current manual process

## General Usage:

Advance Ship Notices - As confirmation of shipment and content information for visibility and automation of receiving, trading partners will be required to provide the ASN/Ship Notice details for all electronically created orders sent through SPS. The data will be captured for Trading Partner Intelligence functionality, Online Reporting, as well as forwarded to Retailer using the agreed upon file format. This information will be used as confirmation of shipment and content details in advance of the receipt of the orders. Retailer will support the Pick and Pack ASN Structure and each ASN will represent a single shipment (Ship-To location). Trading Partners will be expected to include all PO's physically in a single Shipment/Trailer/Container within a single ASN data feed. Details on expectations of trading partners are below:

For Store or DC shipments, Trading Partners can send the ASN data in -

- SOTI (Shipment, Order, Tare/Pallet, Item - Primarily used for single SKU Pallets) format. With this format, the Trading Partner is indicating they have provided the GS1 Shipping label at the pallet level and that the ASN data contains that barcode number.
- SOPI (Shipment, Order, Pack/Carton, Item - used for loose Cartons and pallets containing more than one SKU) format. With this format, the Trading Partner is indicating they have provided the GS1 Shipping label at the Carton level and that the ASN data contains that barcode number.

## Note:

- For those shipments that are palletized -
o Retailer requires that all cartons be labeled and the SSCC information be provided at the pack level when the Pallet contains multiple SKU's. Products will be requires to be packed in layers within the pallet by (i.e. 4 SKU on a pallet would be 4 different labels, one per layer/SKU) the SSCC number can be at either the pallet or carton pack levels.
o Retailers supports trading partners packing multiple orders per pallet. Suppliers will be required to pack PO/SKU in layers and each carton labeled and send SOPI ASN structure. (Note: Sally Beauty will not allow mixed order cartons)

For Drop Ship end consumer shipments, Suppliers will be required to:

- Include a single PO shipped to the end consumer within that single ASN data feed

|  |  | Description: Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set |  |  |  |  |

## Semantics:

1. The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).
2. The implementation convention reference (ST03) is used by the translation routines of the interchange partners to select the appropriate implementation convention to match the transaction set definition. When used, this implementation convention reference takes precedence over the implementation reference specified in the GS08.

## HL Hierarchical Level

| Pos: 0100 | Max: 1 |
| :---: | :---: |
| Detail | Mandatory |
| Loop: HL | Elements: 2 |

User Option (Usage): Must use
Purpose: To identify dependencies among and the content of hierarchically related groups of data segments
Element Summary:

| Ref | Id | Element Name | Req | Type | Min/Max | Usage |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| HL01 | 628 | Hierarchical ID Number | M | AN | 1/12 | Must use |
|  |  | Description: A unique number assigned by the sender to identify a particular data segment in a hierarchical structure |  |  |  |  |
| HLO3 | 735 | Hierarchical Level Code | M | ID | 1/2 | Must use |
|  |  | Description: Code defining the characteristic of a level in a hierarchical structure |  |  |  |  |

|  |  | Code Name |  |  |  |  |
|  |  | S Shipment |  |  |  |  |

## Comments:

1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
2. The HL segment defines a top-down/left-right ordered structure.
3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
4. HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HLO3 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
6. HLO4 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

## Comments:

1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
2. The HL segment defines a top-down/left-right ordered structure.
3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
4. HLO2 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HLO3 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
6. HLO4 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

## Syntax Rules:

1. R0204050612 - At least one of TD502, TD504, TD505, TD506 or TD512 is required.
2. C0203-If TD502 is present, then TD503 is required.
3. C0708 - If TD507 is present, then TD508 is required.
4. C1011 - If TD510 is present, then TD511 is required.
5. C1312-If TD513 is present, then TD512 is required.
6. C1413-If TD514 is present, then TD513 is required.
7. C1512-If TD515 is present, then TD512 is required.

## Semantics:

1. TD515 is the country where the service is to be performed.

## Comments:

1. When specifying a routing sequence to be used for the shipment movement in lieu of specifying each carrier within the movement, use TD502 to identify the party responsible for defining the routing sequence, and use TD503 to identify the actual routing sequence, specified by the party identified in TD502.

## Comments:

1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
2. The HL segment defines a top-down/left-right ordered structure.

## MAN Marks and Numbers Information

| Pos: 1900 | Max: 100 |
| :---: | :---: |
| Detail | Mandatory |
| Loop: HL | Elements: 2 |
|  |  |

User Option (Usage): Must use
Purpose: To indicate identifying marks and numbers for shipping containers
Element Summary:

## Syntax Rules:

1. P0405 - If either MAN04 or MAN05 is present, then the other is required.
2. C0605-If MAN06 is present, then MAN05 is required.

## Semantics:

1. MAN01/MAN02 and MAN04/MAN05 may be used to identify two different marks and numbers assigned to the same physical container.
2. When both MANO2 and MANO3 are used, MANO2 is the starting number of a sequential range and MANO3 is the ending number of that range.
3. When both MAN05 and MAN06 are used, MAN05 is the starting number of a sequential range, and MAN06 is the ending number of that range.

## Comments:

1. When MAN01 contains code "UC" (U.P.C. Shipping Container Code) and MAN05/MAN06 contain a range of ID numbers, MAN03 is not used. The reason for this is that the U.P.C. Shipping Container code is the same on every carton that is represented in the range in MAN05/MAN06.
2. MANO3 and/or MAN06 are only used when sending a range(s) of ID numbers.
3. When both MAN02/MAN03 and MAN05/MAN06 are used to send ranges of ID numbers, the integrity of the
two ID numbers must be maintained.

## User Note 1:

If a single item is being shipped in multiple cartons, each tracking number should be sent in a new MAN iteration.
